Laboratory Work №1

Topic:

Project description. Entities and relations in UML.

Tasks:

- Describe in your own words what are entities and relations in UML and shortly describe each;

- Describe your project;

Tips:

- The entity / relation description will probably go into the "Theory" part of the report;

- If you are part of a team, your "Task" part, the description of the project, should also be personalized - try to focus on the part of the project you're responsible for;

Good Luck!
